Brief Description About Proposed Points:

After the admin logins into the website he will be granted options of uploading data. We created a modal for uploading event data in admin panel. While uploading data we provided form which contained event name, department name, event description, and a image. The data will be stored in the database and to display it in admin panel we successfully fetched data from database and displayed it. We have also added Edit Button and Delete Button. The Edit Button is used to update the particular event data which is already uploaded into the database. When an admin clicks Edit Button same modal form is popped-up with the original details which are already filled. Admin can update everything like Event Name, Department Name, Description, and also the image. After updating, the data in the database will be updated and the updated data will be fetched and displayed in the particular edited row. The delete button can simply delete the particular event. We also faced an error where the first data from the database was added in the database but was not display in the admin panel, we started working on this error.
