Brief Description About Proposed Points:

Our project has already described that the only peoples/users who can login into our website are only Admins. Users will not have any kind of Login access. Firstly, we started creating an login page. All the frontend work of creating an attractive login page interface was completed successfully. We have then created an database table in which the user id and password can be already defined which will be used by Admin. As we told before only admins can login into the website, hence for protecting the other users to create account as admin and login, we have already set an unique User id and password for the admin into the database through which only admins can login into the system using those user id and password. Hence, it protects the data and mischief activities uploading onto the website as only trusted admins (college staff) are given the access to that user id and password.
